Sub-Topic   : Identify the Generic Structure and Language Features

TASK 1
Read the following text and identify the generic structure of the the text

Mount Merapi Erupts, Triggering Evacuations and Ashfall

In February 2023, Mount Merapi, located in Central Java, Indonesia, erupted, spewing ash and volcanic material into the atmosphere. The eruption prompted immediate evacuations of nearby communities and raised concerns about the potential impact on the region.

Mount Merapi is known for its frequent volcanic activity, but the recent eruption surpassed previous events in intensity. The increased seismic activity leading up to the eruption heightened monitoring efforts by local authorities.

Geologist Professor Adi Wijaya comments, "The eruption of Mount Merapi is a significant event, and the heightened seismic activity indicates the need for ongoing monitoring. The evacuation efforts are crucial to ensuring the safety of the local population." Testimonies from evacuated residents and emergency response officials provide insights into the challenges faced during the evacuation process.
