G Reading: Identifying relevant words

Read the article about meat alternatives and choose the correct answer for each question.

Meat, or not meat?

There are around 1.5 billion vegetarians in the world – that's around 22% of the global population that don't eat meat. If that seems a surprisingly high percentage, only 1% of people in the world or 75 million people, choose to become vegetarian and the other 21% either can't eat meat for health reasons or do not have access to it. Those who choose a vegetarian or vegan diet are mostly younger people though more people are moving towards a plant-based diet or in other words, are eating less meat.

So, what does a plant-based diet look like? Well, it's not all broccoli and beans if that's what you're thinking. There are many products that vegetarians and vegans can buy if they want to eat something that has a similar taste or feel to meat, such as tofu and tempeh, made from vegetables, or seitan, made from wheat. For people who aren't ready to give up the taste of real meat, but want to look after animals and the environment, there's something new ... fake meat. Officially called cultured meat, this meat is quite different to tofu or seitan because it is made by taking cells from an animal which is alive, then developing those cells in a laboratory.

Scientists have developed this new food product for several reasons. Some people want to eat less meat not for their own bodies, but because they do not want to hurt animals, or they are worried about how eating meat effects the environment. Farming animals produces a lot of greenhouse gases and uses vital resources. For example, to make just one meat burger you need 660 gallons of water and nearly 65 square feet of land. And we often deliver meat by plane, which produces further emissions.

However, there is a mixed reaction to this scientific development. A few people think cultured meat is a wonderful idea; other people say that it will be difficult to feel like you are eating real meat if you know that it was grown in a laboratory. At the moment, the process is very expensive, so it's hard to say if it will catch on. But, if we want to make changes to our lives and try and help the environment, in my opinion this is another solution that is worth trying.

- 1 What have 75 million people around the world got in common?
A ☐ They don't eat meat by choice.
B ☐ They don't get meat where they live.
C ☐ They don't eat meat to help their bodies.
- 2 What are tofu and tempeh examples of?
A ☐ Something you can have instead of eating meat
B ☐ Something you can have if you can't stop eating meat
C ☐ Something you can have instead of eating vegetables
- 3 What does the writer say about this new food product?
A ☐ The technology people use to make the fake meat is very new.
B ☐ The product is a new ingredient for people who don't eat meat.
C ☐ The way people make it is different to how they make real meat.
- 4 What does the writer say is one of the reasons for developing fake meat?
A ☐ People want to feel they are eating healthily.
B ☐ People want to look after the natural world.
C ☐ People want to eat food from a laboratory.
- 5 Where does the writer say the greenhouse gases come from?
A ☐ People who fly in planes
B ☐ Laboratories that make fake meat
C ☐ Making and transporting meat

6 According to the article, what does the writer think about fake meat?

- A ☐ It is important to experiment.
- B ☐ It is a really good idea.
- C ☐ It costs too much for most people.
