Woman with Keen Sense of Smell Helps Parkinson's Researchers

A woman who _____ she can smell Parkinson's disease before people develop _____ has helped researchers develop an early detection test. Joy Milne began to notice an odd musky smell on her husband 12 years before he was _____ with Parkinson's disease. When she went to a support group for sufferers of Parkinson's she found they all smelled the same. A neurobiologist worked with Milne to identify the odour and its _____ . For the past three years, researchers have been working with Milne and her keen sense of smell to develop a test for early detection. Researchers hope Milne's strong sense will also be _____ in tuberculosis research.
