

**I. Choose the correct answer.**

- Pond is an example of \_\_\_\_\_.  
a) marine                      b) freshwater  
c) deserts                      d) mountain
- The important function of stomata is \_\_\_\_\_.  
a) conduction                  b) transpiration  
c) photosynthesis              d) absorption
- Organ of absorption is \_\_\_\_\_.  
a) root                          b) stem  
c) leaf                          d) flower
- The habitat of water hyacinth is \_\_\_\_\_.  
a) aquatic                      b) terrestrial  
c) desert                        d) mountain

**II. Fill in the blanks.**

- Earth's surface is covered by \_\_\_\_\_ % of water.
- The driest places on the Earth are \_\_\_\_\_.
- Fixation and absorption are the main functions of \_\_\_\_\_.
- Primary organs of photosynthesis are \_\_\_\_\_.
- Taproot system is present in \_\_\_\_\_ plants.

**III Arrange the following in correct sequence.**

1. Leaf – Stem – Root – Flower

2. Transpiration – Conduction -
- 
- Absorption – Fixation

**IV. Match the following.**

- |                   |   |              |
|-------------------|---|--------------|
| 1. Mountain       | - | a. Monocot   |
| 2. Desert         | - | b. Branches  |
| 3. Stem           | - | c. Dry place |
| 4. Photosynthesis | - | d. Himalayas |
| 5. Fibrous root   | - | e. Leaves    |

1. \_\_\_\_\_

2. \_\_\_\_\_

3. \_\_\_\_\_

4. \_\_\_\_\_

5. \_\_\_\_\_
