

Minute Concept

Let's see an example :

In this clock, the short hand (hour hand) is at 1 and long hand (minute hand) is at 3.

We know that the long hand takes 5 minutes to move from one number to another.

Let us count the numbers to come from 12 to 3. It comes 3. So, we add 5 three times. It also means 3 times 5 i.e. 15. We write it as :

$$3 \times 5 = 15$$

So, now the time is 1 hour and 15 minutes. We write it as :

01 : 15

Tell the time in the following clocks. One has been done for you :

01 : 20
