## FRUIT FOR THE ZOO ANIMALS

Help the zookeeper! Select the correct answer and drag it to the answer box.

1. The Monkey 

The monkey eats  $2x + 4$  bananas every day.

Today,  $x = 2$ .

How many bananas did the monkey eat?

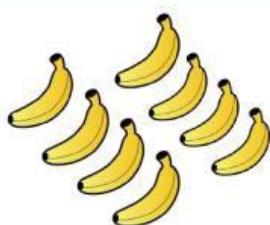

Answer:

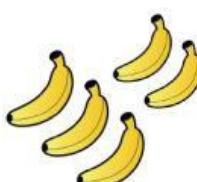

A.

B.

C.

D.

2. The Elephant 

The elephant eats  $3x - 1$  apples.

If  $x = 3$ , how many apples did the elephant eat?

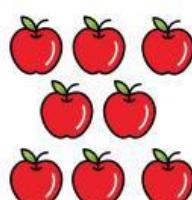

Answer:

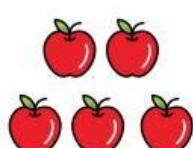

A.

B.

C.

D.

# Exercises on Algebraic Operations

## Drag and Drop

(Fill in the blanks to make the expressions correct!)

1.  $2x \underline{\hspace{1cm}} 3x = 5x$

2.  $6x - \underline{\hspace{1cm}} = 3x$

3.  $\underline{\hspace{1cm}} + 3(x - y + 2z) = 5x + 0y + 8z$

4.  $(2x + 3y - z) + \underline{\hspace{1cm}} - (x + 2y + 2z) =$   
 $5x + 0y + 2z$

**2x**

**+**

**$(4x - y + 5z)$**

**$2(x + y + z)$**

# Exercises on Algebraic Operations

Match each question on the left with the correct answer on the right.

Liam has  $x$  candies. His friend gives him 5 more. Now he has 11 candies. What is the value of  $x$ ?

Simplify the expression:  
 $3x + 88y - 6x \div 4y$

Anna buys  $x = 3$  notebooks, each costs Rp12,000. She also buys  $y = 2$  pens, each costs Rp7,000. She uses a shopping voucher of Rp10,000. Then she splits the total cost evenly with her friend. How much does each person pay?

What is the value of the expression:  $2x - 1$  when  $x = 4$ ?

Rina buys:  
 $x = 4$  sketchbooks, each for Rp10,000  
 $y = 3$  boxes of crayons, each for Rp12,000  
 $z = 2$  rulers, each for Rp5,000  
She receives a bundle discount of Rp8,000 and splits the final cost equally with 1 friend. How much does each person pay?

Rp39.000

Rp25.000

6

$3x + 88y - \frac{3x}{2y}$

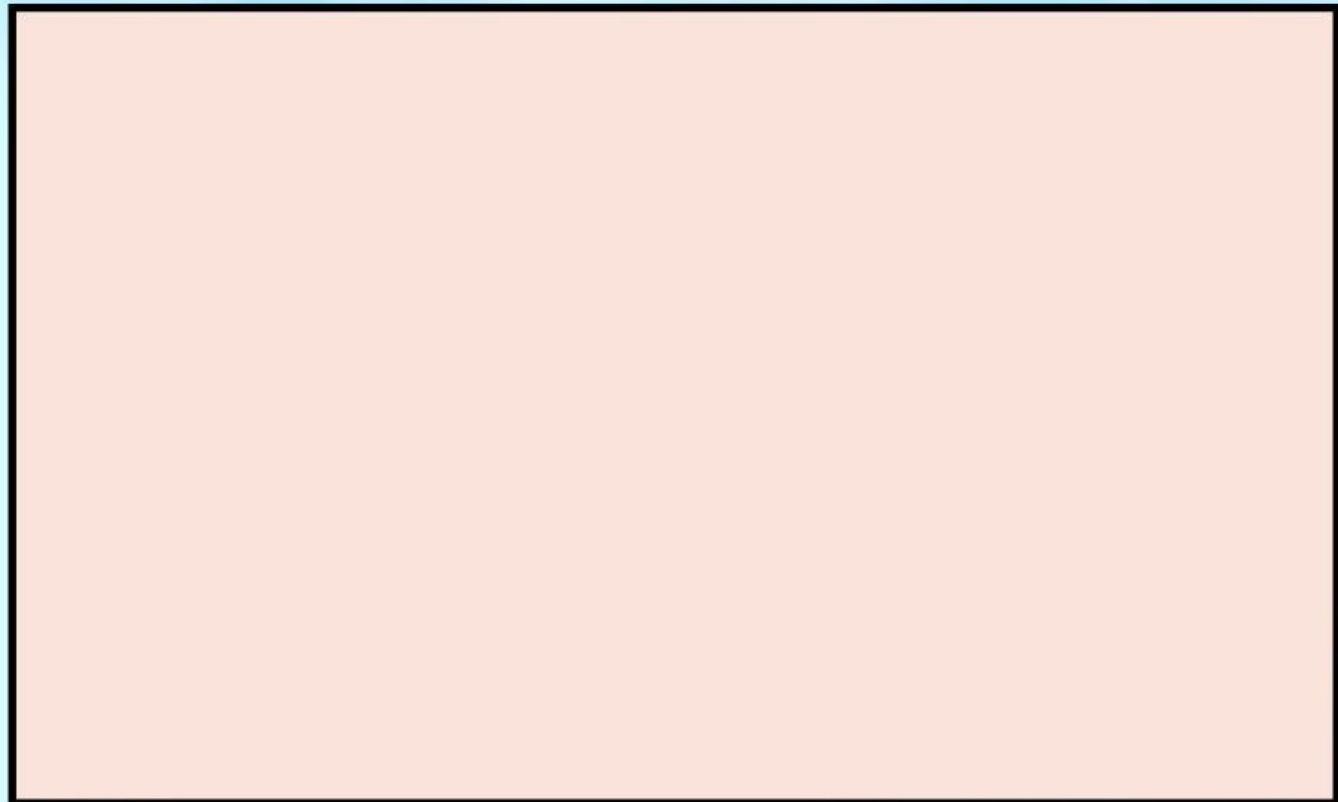

7

Rp20.000

$-3x + 11y$
