

Part 2 Error Correction

Practice

1

Read the text below and correct the underlined errors.

For each question, write the correct word in the space provided on your answer sheet.

The Innovation of Transport

The classic novel 'Around the World in Eighty Days' by Jules Verne (0) were published at a time when technological innovations in transportation had begun to develop. The main character in the story (1) travel by trains and ships in his quest to win his bet that he could travel around the world in eighty days. The novel had inspired people to travel.

In the beginning, (2) us ancestors just walked from one place to another and later, they discovered that they could use water as a mean to transport things. Since then, there have been a lot of changes in the history of transportation and continued to change (3) around a period of time.

Mankind has invented a great number of technological innovations. The taming of horses, the (4) invented of wheels, the steam engines and the expanding railways together with steamboats helped them to venture further and beyond (5) them living area. They could travel at a faster speed, too. However, locomotives and improved roads are the most important of these inventions. The improved transport system helped to ship items with (6) most efficiency which helped in boosting the economy.

In the 20th century, people were still innovative (7) or the focus in the transport development was aimed at improving existing transport rather than at inventing a new one. The modern technology (8) had been approaching the goal of creating a vehicle without a driver, using the artificial intelligence technology and soon, we may see a car that drives to our house, all by itself, drives us to work and on the way, picks up another passenger.
