Useful gadgets: the toothbrush

Toothbrushes existed thousands of years ago in Egypt, but they were very different. There wasn't any plastic or nylon, so the ancient Egyptians collected pieces of wood from trees and used them to brush their teeth. The modern toothbrush appeared in the 15th century. First, the Chinese invented brushes with hair from pigs, then Europeans copied this idea

but with horse hair. In 1935, the chemist Wallace Carothers invented nylon, and the first nylon toothbrushes arrived in Europe from the USA in 1938. Switzerland produced an experimental electric toothbrush in 1939, but there weren't any electric toothbrushes in the shops until the 1960s. Modern electric toothbrushes appeared in 1987. So, when you brush your teeth, think about this question: do you prefer your toothbrush, a piece of wood or pig's hair? A difficult question?

4 Vyber správné

- 1 There **were** / **weren't** toothbrushes thousands of years ago.
- 2 The first toothbrush **was** / **wasn't** plastic and nylon.
- 3 There **were** / **weren't** modern toothbrushes in the 15th century.
- 4 There **were** / **weren't** nylon toothbrushes in Europe before 1938.
- 5 There **were** / **weren't** electric toothbrushes in the shops in 1939.

5 Odpověz na otázky

Where were the first toothbrushes?

What did the ancient Egyptians use to brush their teeth?

When did the modern tooth brushes appear?

What did the chemist W. Carothers invent?

When did the electric tooth brushes appear?
