Part 3

Read the passage and choose the correct answer to the question.

Cookies are small files that websites store on your computer to collect and remember information. They help websites remember user settings, login details, and shopping cart items. While cookies can be helpful for a smoother Browse experience, having too many may slow down your browser. You can delete cookies anytime from your browser's settings menu to improve speed and performance.

Question 7: What is one purpose of cookies?

- A. To upgrade the browser
- B. To store user settings
- C. To increase download speed

Read the passage and choose the correct answer to the question.

An operating system that supports multitasking lets you run several programs at the same time. For example, you can listen to music, write a document, and browse the internet without closing any of them. Without multitasking, only one application could run at a time, which slows down productivity.

Question 8: Why is multitasking useful?

- A. It increases screen brightness.
- B. It allows many programs to run at once.
- C. It makes the computer smaller.

Read the passage and choose the correct answer to the question.

Updates to operating systems and web browsers fix bugs, improve performance, and strengthen security. These regular updates may also include useful new features or tools and help protect your device from malware, viruses, or hackers. If you ignore updates, your system might become slow, outdated, or unsafe. Most modern devices allow automatic updates to save time and effort."

Question 9: Why are updates important?

- A. They make the device slower
- B. They fix bugs and improve security
- C. They delete your files

Read the passage and choose the correct answer to the question.

Operating systems control the basic functions of a computer. They manage hardware like the CPU, memory, and storage devices. Without an operating system, a computer cannot run programs or communicate with connected devices. Windows, macOS, and Linux are examples of operating systems used on personal computers and laptops.

Question 9: What does an operating system help manage?

- A. Only software
- B. Only the display screen
- C. Hardware and basic functions

Read the passage and choose the correct answer to the question.

Internet browsing is done through applications called web browsers. These include Chrome, Firefox, Safari, and Edge. Browsers allow users to visit websites, watch videos, and download files. They also save passwords and browsing history if allowed. To protect privacy, users can enable private browsing, which does not store history or cookies."

Question: What does private browsing do?

- A. It does not store history or cookies
- B. It saves browsing history
- C. It stores passwords

Part 4

Read the passage. Decide if the statement is True or False based on the information from the text.

Most modern operating systems come with built-in security features such as firewalls and automatic updates. These tools help protect the system from viruses, malware, and other online threats. Users should keep these features enabled and regularly update their system to ensure the highest level of protection."

Question 10: Built-in security features in modern operating systems protect them against online threats.

- A. True
- B. False

Read the passage. Decide if the statement is True or False based on the information from the text.

"Operating systems provide a platform for running software and managing hardware devices like printers, keyboards, and storage drives. Without an operating system, most computers cannot function. Operating systems also offer tools for file management and security. Users often choose an OS based on personal needs and the type of software they plan to use."

Question 11: A computer can work properly without an operating system

- A. True
- B. False

Fill in the blank with TWO or THREE words from the text to complete the summary.

An operating system update improves the security and performance of a computer. Updates may include bug fixes, new features, or protection against the latest viruses and threats. Keeping your OS up to date ensures the system runs efficiently and safely. Most systems can be set to update automatically in the background.

Question 12: Summary: Updating the operating system helps improve security, fixes bugs, updates new features and makes the system work.....

Answers:

Fill in the blank with TWO or THREE words from the text to complete the summary.

A search engine helps users find information online by showing a list of websites that match the keywords entered. Google, Bing, and Yahoo are some of the most popular search engines. Using clear and specific keywords gives better results. Search engines are essential tools for internet browsing and learning, making it easier and faster to access knowledge anytime."

Question 13: Summary: A search engine finds websites based on keywords and is an important tool for.....and online research.

Answers:

Fill in the blank with TWO or THREE words from the text to complete the summary.

Passage: Most internet browsers offer a feature called private browsing or incognito mode. When using this mode, the browser does not save your history, cookies, or login details. This is useful when using a shared computer or when users want to keep their browsing activity private. However, private browsing does not make users completely anonymous online.

Question 12: Summary: Private browsing prevents the browser from saving history or cookies, helping users protect their _____ on shared devices.

Answers:

Part 5
