

## Functions of the male reproductive system.

<b>A. Seminal vasicle</b>	Male organ through which sperm can enter the female reproductive system.
<b>B. Vas deference</b>	Produces sperm cells.
<b>C. Penis</b>	Glands that produce a liquid called semen.
<b>D. Testicle</b>	Tube that connects the epididymis with the seminal vesicles.
<b>E. Bladder</b>	Duct behind testes; sperm passes through to Vas deference.
<b>F. Uretra</b>	Tube that connects the bladder to the organ that removes urine.
<b>G. Epidydimis</b>	Stores urine and allows urination.
