

# Female Reproductive System

ชื่อ..... ชั้น..... เลขที่.....

An anatomical diagram of the female reproductive system. The central organ is the pear-shaped uterus, shown in a reddish-pink color. It has two fallopian tubes extending from its upper corners towards the ovaries. The ovaries are depicted as small, bumpy, greyish structures. The diagram is surrounded by six empty rectangular boxes with red borders, each containing four horizontal lines for text. Black lines connect these boxes to specific parts of the reproductive system: one box points to the left fallopian tube, another to the left ovary, a third to the upper part of the uterus, a fourth to the lower part of the uterus, a fifth to the right fallopian tube, and a sixth to the right ovary.

A large rectangular box with rounded corners and a red border. Inside the box, there are four horizontal red lines spaced evenly apart, providing a template for writing.
