a) browse b) search

c) attach d) install

Task 2: Read and write True / False.

More than 140 years ago, Alexander Graham Bell made the first telephone call. But the phone was very simple. It had no screen, no camera, and you could only use it for speaking. People needed wires to connect one phone to another, and at first, only a few people could afford one. Still, it was an amazing invention at the time.

LIVEWORKSHEETS

Phones today are much smaller, lighter, and far more powerful. We can carry them in our pockets, and they are not just for calling anymore. Smartphones allow us to take photos, record videos, listen to music, play games, and connect to the internet. In fact, your smartphone today is more powerful than the computers used in the Apollo 11 mission to the Moon! With apps, touchscreens, and wireless technology, we don't even need buttons like before.

So, what about the future of phones? Scientists are already working on foldable phones, holographic screens, and even devices you can wear like glasses or watches. In the future, phones may become so small that they are built into our clothes, or even our bodies. They may understand our thoughts and help us in daily life without us even touching them. The phone of tomorrow might be smarter than we can imagine today.

1. The first telephone had a screen and a camera. .....

2. At first, not many people had a telephone because it was expensive.

.....

3. Today, smartphones can only be used to make calls. .....

4. Smartphones now are more powerful than the computers used in Apollo 11. .....

5.In the future, phones may become foldable, wearable, or even built into our clothes. .....

Task 3: Listen and choose the correct answers.
