

## Direct and Indirect

1. As the number of pages you read increases, your knowledge also increases.
2. If the speed of a bicycle doubles, the time to cover the same distance becomes half.
3. When the brightness of the bulb increases, the room becomes more visible.
4. If the number of workers decreases, the days required to finish the work increase.
5. The more you practice solving sums, the better your accuracy becomes.
6. If the water flows faster, the tank fills in less time.
7. When the length of the rope increases, the area you can tie around also increases.
8. If the price per pen decreases, the number of pens you can buy with ₹100 increases.
9. The higher the marks scored, the greater the chance of getting a prize.
10. If the number of buses reduces, the crowd inside each bus increases.
