

The Planet Protectors: A Mission for Everyone!

Our planet, Earth, is our beautiful home. It gives us air to breathe, water to drink, and amazing places to explore. But our home needs our help! Some things people do can create **pollution** and harm the environment. The good news is that we can all become Planet Protectors!

One big challenge is climate change. This means the whole world's weather patterns are changing too fast. A big part of this is **global warming**, which is when the Earth gets warmer. This happens when we burn too many fuels for energy, which traps heat around our planet.

So, how can we fight **climate change** and **protect the environment**? It's easier than you think! Here are some super-powered missions for you:

- Mission: Save Power! When you leave a room, **switch off lights** and electronics. Leaving them on is a way to **waste energy**. Even better, we can ask our families to use **renewable energy**, like power from the sun and wind, which doesn't pollute the air.
- Mission: **Save Water!** Turn off the tap while you brush your teeth. Taking shorter showers helps save water. Clean water is precious, and saving it uses less energy.
- Mission: **Recycle!** Don't just throw everything away! Sort your paper, plastic, and cans so they can be made into something new. When we recycle, we create less trash and help our planet.
- Mission: Clean Up! If you see a piece of trash on the ground, be a hero and **pick up rubbish**. Putting it in the bin keeps our parks, schools, and streets clean and safe for animals.
- Mission: Plant Life! Trees are like the Earth's lungs. They clean our air and provide homes for animals. We must not **destroy the rainforests**, which are full of life. You can help by asking to **plant trees** in your community or even growing a plant at home.

Every small action adds up to a big difference. By working together, we can keep our planet happy, healthy, and beautiful for all future generations.

Comprehension Questions

1. What is one thing that causes global warming?

- a) Planting trees
- b) Using too much energy from burning fuels
- c) Picking up rubbish

2. Why is it important to save water?

- a) Because clean water is precious and saving it also saves energy.
- b) Because we can use it to water our toys.
- c) Because all the water on Earth is gone.

3. What does it mean to recycle?

- a) To throw everything in the trash.
- b) To turn off the lights when you leave a room.
- c) To sort materials like paper and plastic so they can be made into new things.

4. What are two things you can do to save energy?

- a) Destroy rainforests and waste energy.
- b) Switch off lights and use renewable energy.
- c) Leave the water running and never recycle.

5. Why are rainforests so important?

- a) They are places we can throw our rubbish.
- b) They are full of life and help clean the air.
- c) We need to destroy them to build more houses.

6. What is the main idea of this passage?

- a) Climate change is a problem, and there is nothing we can do.
- b) Everyone, including kids, can do small things to help protect the Earth.
- c) Global warming is a fun adventure.

protect the environment, climate change, save water, plant trees, switch off lights, waste energy, recycle, pollution, destroy the rainforests, pick up rubbish, use renewable energy, global warming
