

To find the area of a rectangle, you multiply (\times) its Length by the Width.

$$\text{Area} = L \times W$$

Area of Rectangles Using the Formula Method

Find the area of the following rectangles.

1.

Length = cm Width = cm

$$\text{Area} = \text{cm} \times \text{cm}$$

$$\text{Answer} = \text{cm}^2$$

2.

Length = cm Width = cm

$$\text{Area} = \text{cm} \times \text{cm}$$

$$\text{Answer} = \text{cm}^2$$

3.

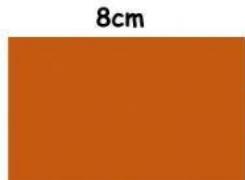

Length = cm Width = cm

$$\text{Area} = \text{cm} \times \text{cm}$$

$$\text{Answer} = \text{cm}^2$$

4.

Length = cm Width = cm

$$\text{Area} = \text{cm} \times \text{cm}$$

$$\text{Answer} = \text{cm}^2$$

5.

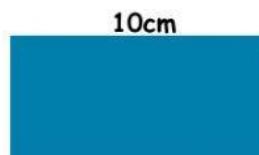

Length = cm Width = cm

$$\text{Area} = \text{cm} \times \text{cm}$$

$$\text{Answer} = \text{cm}^2$$

6.

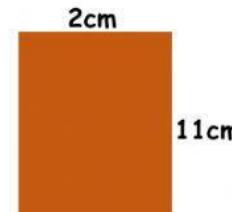

Length = cm Width = cm

$$\text{Area} = \text{cm} \times \text{cm}$$

$$\text{Answer} = \text{cm}^2$$

7.

Length = cm Width = cm

$$\text{Area} = \text{cm} \times \text{cm}$$

$$\text{Answer} = \text{cm}^2$$

8.

Length = cm Width = cm

$$\text{Area} = \text{cm} \times \text{cm}$$

$$\text{Answer} = \text{cm}^2$$
