III. Read the text and choose the correct answers.

The Planets in Our Solar System

Our Solar System has eight planets. The closest planet to the Sun is Mercury. It is very hot during the day but very cold at night. The second planet is Venus, which is the hottest planet. It has thick clouds that trap the heat. Next is Earth, where we live. Earth has water, air, and many living things.

After Earth comes Mars, also called the Red Planet because of its red soil. Some people think there might be life on Mars one day! Then, we have the largest planet, Jupiter. It has a big storm called the Great Red Spot. Saturn is famous for its beautiful rings made of ice and rocks.

Further away, we find Uranus. It is very cold and spins on its side! The last planet is Neptune, which is far from the Sun and is also very cold. These planets move around the Sun in big circles called orbits.
