| Question 24. | A. criminal | B. discrimination | C. crime | D. compliance |
| Question 25. | A. when | B. who | C. that | D. which |
| Question 26. | A. do | B. are | C. have | D. did |
| Question 27. | A. unless | B. because | C. although | D. even if |
| Question 28. | A. area | B. site | C. position | D. place |

Read the following passage and mark the letter A, B, C, or D to indicate the correct answer to each of the questions.

The 21st century has become another important century for inventions and discoveries. We are only in the 2nd decade of this century currently but we have already witnessed many big innovations that have drastically changed our way of living. Bluetooth technology, broadband internet, artificial heart, genetic engineering, virtual reality, 3D printing are some to name a few. These inventions are changing the way we live, do our things and communicate with others. Even though some of these developments are in the early stage of innovation, they have a more sophisticated and promising future. Social media is one of the most important aspects that has affected each person in this modern time.

According to Heidi Cohen, Social Media are the platforms that enable the interactive web by engaging users to participate in, comment on and create content as means of communicating with their social graph, other users and the public. The power of social media has changed most of the things in our daily life. Social media has revolutionized and completely changed the way we send and receive information. **It** is more interactive, can be done in real-time and uses a wide number of media like text, audio, video, pictures, graphics and more. With these sites, sending and receiving messages offline and in real-time, audio and video chatting, sharing pictures, video and text, going "Live" to many audiences, meeting old friends and making new ones have revolutionized our way of establishing connections with others.

There are also negative sides to the innovation of social media and its usage. An increase in cybercrime, invasion of privacy, security threats, etc. are some of the issues associated with social networks. But at the same time, social networks are working to cope with the increasing problems that arise with the improper use of it. With more and more sophistication and versatility of use, social media have undoubtedly proved to be a **boon** to connectivity and social interaction between people in this age of communication and information technology.

Question 32. According to the passage, which of the following sentences is **TRUE**?

- A. The new inventions remain the way we interact with each other.

- B. It's unlikely for people to process documents on social media.
- C. Using social media improperly will increase the problems for users.
- D. People nowadays send and receive more online messages than normal.

Question 33. The word "**boon**" in the last paragraph is closest in meaning to _____.

- A. benefit
- B. drawback
- C. challenge
- D. advance

Read the following passage and mark the letter A, B, C, or D to indicate the correct answer to each of the questions.

While the debate regarding how much screen time is appropriate for children rages on among educators, psychologists, and parents, it's another emerging technology in the form of artificial intelligence and machine learning that is beginning to alter education tools and institutions and changing what the future might look like in education. It is expected that artificial intelligence in U.S. education will grow by 47.5% from 2017-2021 according to the Artificial Intelligence Market in the US Education Sector report. Even though most experts believe the critical presence of teachers is irreplaceable, there will be many changes to a teacher's job and to educational best practices.

AI has already been applied to education primarily in some tools **that** help develop skills and testing systems. As AI educational solutions continue to **mature**, the hope is that AI can help fill needs gaps in learning and teaching and allow schools and teachers to do more than ever before. AI can drive efficiency, personalization and streamline admin tasks to allow teachers the time and freedom to provide understanding and adaptability—uniquely human capabilities where machines would struggle. By leveraging the best attributes of machines and teachers, the vision for AI in education is one where they work together for the best outcome for students. Since the students of today will need to work in a future where AI is the reality, it's important that our educational institutions expose students to and use the technology.

Artificial intelligence tools can help make global classrooms available to all including those who speak different languages or who might have visual or hearing impairments. Presentation Translator is a free plug-in for PowerPoint that creates subtitles in real time for what the teacher is saying. This also opens up possibilities for students who might not be able to attend school due to illness or who require learning at a different level or on a particular subject that isn't available in their own school. AI can help **break down** silos between schools and traditional grade levels.
