

TRAPEZOID AREA SHEET 1

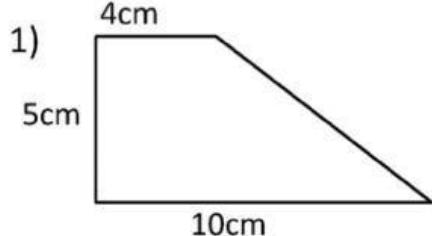

Find the area of these trapezoids by splitting them up into rectangles and triangles. They are not drawn to scale.

Example

Area = area of rectangle + area of triangle

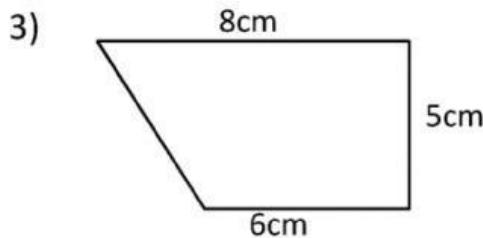

$$\text{Area} = 6 \times 3 + \frac{1}{2} \times 2 \times 3 = 18 + 3 = 21\text{cm}^2$$

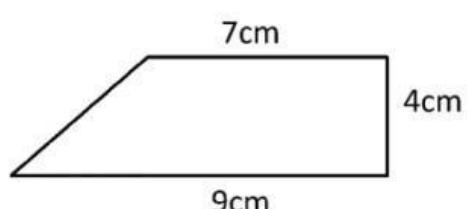

$$\text{Area} = \text{_____ cm}^2$$

$$\text{Area} = \text{_____ cm}^2$$

$$\text{Area} = \text{_____ cm}^2$$

$$\text{Area} = \text{_____ cm}^2$$

Handy hint:

The formula for the area of a trapezoid is
 $\frac{1}{2} \times (\text{length1} + \text{length2}) \times \text{height}$
