

## Read the text and answer the questions.

### A Day at the Science Fair

Last week, our school organized a science fair that everyone had been eagerly waiting for. The event took place in the school gym, which was transformed into a colorful exhibition hall filled with posters, experiments, and creative displays. Students from different grades presented their projects, and each one had something unique to show.

As soon as we entered, the smell of fresh paint and the sound of excited voices filled the air. One corner featured solar-powered inventions, while another displayed simple robots built from recycled materials. My group presented an experiment about water filtration. We demonstrated how sand, charcoal, and cotton could purify dirty water. Many visitors stopped by to watch, and the judges asked us interesting questions about our method.

The highlight of the fair was the chemistry show at the end of the day. The science teacher mixed colorful liquids that suddenly produced bright foam and smoke. Everyone gasped and clapped with excitement. Before leaving, the principal congratulated the students for their creativity and teamwork.

It was a day full of learning, fun, and discovery. I realized that science is not only about textbooks and formulas—it's about curiosity and finding solutions to real-life problems.

### Comprehension Questions

1. What is the main purpose of the text?
  - a) To explain a science experiment
  - b) To describe a memorable school event
  - c) To persuade students to study science
  
2. Where did the event take place?
  - a) In the school library
  - b) In the school gym
  - c) In the classroom
  
3. What was the writer's project about?
  - a) Solar energy
  - b) Robotics
  - c) Water filtration
  
4. What emotion did students feel during the chemistry show?
  - a) Fear
  - b) Excitement
  - c) Confusion
  
5. What did the principal praise the students for?
  - a) Their creativity and teamwork
  - b) Their grades and attendance
  - c) Their sports achievements

6. The word “curiosity” in the last paragraph is closest in meaning to:

- a) Interest
- b) Fear
- c)

Laziness
