

Stundas un minūtes

1. Atkārtosim pilnas stundas! Ievieto!

Naktī, no rīta, priekšpusdienā pulkstenis rāda un saka vienu un to pašu.

				
				
				
				
				
				

Pēcpusdienā un vakarā pulkstenis rāda tā, bet saka citādi.

2.Mācīsimies minūtes! Ievieto!

Pulksteņa garais rādītājs skaita minūtes. Tas apiet vienu apli 60 minūtēs. Ceļš no viena skaitļa līdz nākamam aizņem 5 minūtes.

3.Darbojies praktiski!

Ieraksti minūšu rādījumu!
