0. Scientists use DNA and genetics to study animals and understand their health.

1. By checking an animal's _____, we can detect diseases early and give the right treatment.

2. The use of _____ in farming can contaminate the environment and kill pollinators.
3. Some animals are kept _____ because of habitat loss and poaching.
4. Humans and animals are _____, meaning that losing one species affects all others.

III. Read the text and answer the questions in FULL SENTENCES.

Last weekend, Minh's science club visited a wildlife park to learn about how modern science helps protect animals.

At the park, a biologist explained how genetics is used to study genetic diversity among endangered species. She showed the students how scientists can detect diseases early and use an antibiotic to stop any infection before it spreads.

After that, they observed several animals kept in captivity inside large enclosures. The guide said that living away from the wild sometimes changes their natural instinct.

Later, the class discussed how human activities such as using pesticides or contaminating rivers lead to serious habitat loss. They also learned that animals and humans are deeply interdependent, and protecting pollinators like bees is essential for both.

Before leaving, they saw a photo of a tiger that was about to be released into the wild. Minh thought it was truly inspiring.

Questions:

0. Where did Minh's club go last weekend?

→ Minh's club went to a wildlife park.

1. What does genetics help scientists study?

→ _____.

2 How do scientists stop infection from spreading in animals?

→ _____.

3. What happened to the tiger at the end of the visit?

→ _____.

IV. Fill in the blanks with the PRESENT PERFECT or PRESENT PERFECT CONTINUOUS.
