Animal body parts.

There are many different animals in the world. They live on land and in water, they can fly, run fast and swim. Different animals have different parts of body, for example all birds have _____(1) so they can fly and their bodies are covered with _____(2). Some birds eat fruit and grass, but there are birds who hunt for small animals and fish. Such birds have big _____(3) on their legs and big strong _____(4) on their head to catch food. Some animals have special parts of body to protect themselves. For example hedgehogs have long _____(5), tortoises have strong _____(6), so other animals can't eat them, rhinos have _____(7) on their head and elephants have two _____(8) near their mouths so they can fight with other animals. Some animals have unusual parts of body, for example elephants have a long _____(9) which is their nose and a hand at the same time. They use it to take something, to drink water and to touch each other. Monkeys have a long _____(10) which they use to climb trees and navigate.
