Câu số 5:

Part 3:

Technology in childhood

Person A:

When I was young, I enjoyed playing simple computer games that my dad had programmed for me. Today, I teach my children to code using easy-to-use platforms like Scratch. These tools make learning programming enjoyable, though I spend time helping them grasp the logic behind it. Working together on coding fosters both creativity and teamwork.

Part 3:

Person B:

As a child, I loved spending time with my friends, building and controlling toy robots. I'll never forget the thrill of making them move. Those experiences sparked my passion for technology, and I still look back fondly on those moments of discovery.

Person C:

When I was younger, I was fascinated by science magazines about robots and computers. The articles fueled my curiosity. Now, I develop mobile apps, creating tools for daily life. Thanks to modern software, the development process has become faster, but the excitement of innovation remains the same.

Person D:

As a kid, I spent rainy days with my siblings watching TV shows about gadgets and inventions. We eagerly awaited each new episode. Today, I prefer taking online courses to stay up-to-date with AI and blockchain. They offer flexibility and are a great way to keep pace with the rapidly changing tech world.

Part 3:

Whose idea was this?

1. Who finds modern tools more accessible? _____

2. Who now enjoys app development? _____

3. Who loved playing with toy robots as a child? _____

4. Who loved watching tech shows as a child? _____

5. Who now prefers online learning? _____

6. Who enjoys coding with family? _____

7. Who loved science magazines as a child? _____

Part 4:

MOUNTAIN SUMMITS

1. The term "mountain" has evolved over time, reflecting not only physical characteristics but also cultural significance. Before the 19th century, people were quite shy when it came to conquering mountains. Today, with the development of technology, reaching the highest peaks has become easier. In contemporary discussions, mountains may symbolize challenges to overcome or destinations for adventure, transcending their geographical attributes.

Part 4:

2. Climbing a mountain often leads to a profound sense of accomplishment. It represents not just reaching a physical summit but also conquering personal fears and pushing one's limits, creating memories that last a lifetime. Besides, mountain climbing also creates Adrenaline - a hormone that creates a feeling of excitement like when playing other extreme sports.

3. In today's digital age, sharing achievements has become prevalent. Even before social media, documenting climbs seemed like a given. Climbing a mountain is frequently documented on social media, turning personal milestones into public spectacles that inspire others while also raising questions about authenticity.

4. In recent years, some climbers have become more focused on taking photos for social media than respecting the mountains they visit. Long lines form near popular summits as people wait for the perfect picture, often ignoring weather warnings or safety advice. In some cases, this obsession with online fame has led to serious accidents. It shows how personal image is sometimes valued more than safety or responsibility.

5. Mount Everest, once a symbol of human courage, has now become a worrying example of how adventure can harm nature. Every climbing season, long lines of climbers crowd the narrow paths to the summit, leaving behind waste and pollution on the fragile slopes. What used to be a personal challenge has turned into a commercial race, where success is measured by photos and fame rather than respect for the mountain. This situation is disturbing because it shows how our desire to conquer the world's highest peak has created serious environmental and moral concerns.

Part 4:

6. As the number of climbers on Mount Everest continues to rise, the need to focus on sustainability has become urgent. Local authorities and environmental groups are now introducing stricter waste management rules, encouraging climbers to bring back what they carry, and limiting the number of expeditions each season. Some teams have even started "clean-up climbs" to remove rubbish left behind on the slopes. These efforts remind us that protecting the mountain is just as important as reaching its peak. True success on Everest should mean leaving the mountain cleaner and safer for future generations.

7. Shared experiences in challenging environments, like mountains, can deepen intimacy in relationships. Couples or friends who navigate the challenges of climbing together often find their bonds strengthened through mutual support and understanding.

Read the text. Match the headings to the paragraphs.

1. _____

2. _____

3. _____

4. _____

5. _____

6. _____

7. _____

Part 4:

Read the text. Match the headings to the paragraphs.

1. _____

2. _____

3. _____

4. _____

5. _____

6. _____

7. _____
