

**Exercise 8: Điền mạo từ thích hợp vào chỗ trống để tạo thành một bài Writing Task 2 hoàn chỉnh.**

There are several reasons that are causing the environmental harms and this has become (1).....urgent issue to discuss and bring about (2).....solution. The number of ever increasing cars is one of (3)...

reasons that leads to affect the environment negatively and there are some assumptions that increasing the fuel price would solve this problem. But the reality would be different, and increased fuel price will cause lots of other problems while it would contribute very little to reduce the environmental pollutions and hazards. So this can't be the best solution in any way.

First of all, the maximum numbers of cars are owned by the rich people and fuel price would not restrain them from using the cars. The price of (4)

fuel, in fact, increased significantly over the past 12 years and that has done nothing to reduce the car usages. On the contrary, the number of cars running on the roads has increased more than expected. Besides, (5)

fuel price determines the market prices of other daily necessary products and increasing the price would only bring misery to the low and medium earning class population. Electronic wastages, industries, household electrical devices, deforestation, chemical wastages, unthoughtful activities of people are causing more damage to the mother earth than the gas omission by the cars. We should focus on those aspects as well before increasing the price of fuel just based on (6)

assumption. The main idea of increasing the fuel price is to reduce (7) number of cars running in the street and to restrain the car owners from using the cars less. But that would prove to be (8)

ridiculous solution especially when car owners are mostly high earning class and they would not bother about the fuel price. The best solution to address this utmost concerning issue is to introduce (9)

environment friendly energy source like solar energy system, to improve the public transportation system & train system so that people mostly use these systems instead of always

using their own cars, increasing the awareness of the people so that they do not directly contribute to harm the environment, and making strict rules so that deforestation, chemical wastes and other harmful ways of (10)... environmental pollutions get reduced.
