

How do flowering plants reproduce?

8 LABEL the parts of this flower. WRITE **calyx**, **corolla**, **pistil** and **stamen**.

9 CIRCLE the correct words in these sentences about the parts of flowering plants.

- The pistil is the **male** / **female** part of the flower. It contains the ovary.
- The calyx consists of small green leaves called **sepals** / **petals**.
- The **ovary** / **corolla** consists of coloured parts called petals.
- The stamens are the **male** / **female** part of the flower. They produce pollen.
- The seed contains a very small plant called an **ovary** / **embryo**.

10 USE the key to circle the types of fruits.
