

## Aquatic Secrets

Aquatic life holds many secrets within it. Let's unveil these secrets hidden in the deep sea. Read the secrets and write the names. Use the help box :

1 Their ten arms surround their mouths and all the arms bear suckers. \_\_\_\_\_

These irregular shaped animals have an internal skeleton of limestone or silica. \_\_\_\_\_

2

3 This fish blows up its body like a balloon to scare its enemies. This way the enemy can't swallow it either. \_\_\_\_\_

The skeleton of this animal is seen outside its body. It may be soft, horny or stony. \_\_\_\_\_

4

5 This round or diamond shaped fish has tail stings, which are poisonous. \_\_\_\_\_

The prettiest of all fishes is the \_\_\_\_\_. \_\_\_\_\_

6

7 These fishes have bones near their tails, which are as sharp as a surgeon's knife. \_\_\_\_\_

### KNOW MORE

Lungfish can live out of water for several years. It secretes a mucus cocoon and burrows itself under the unbaked earth. It takes in air with its lung through a built-in breathing tube that leads to the surface. The lungfish has both gills and lungs.
