## Reading

**Learning by ourselves**

These days, we are all so used to using a computer that we don't need to think about it. But imagine you'd never used a computer before. What would you do if you were given one that had no instructions and that was in a language you didn't recognise?

Well, that's exactly what Professor Sugata Mitra did to children in Kalkaji, one of the poorest neighbourhoods of the Indian capital, New Delhi, in 1999. Professor Mitra specialised in education and technology, and he decided to place a computer with an Internet connection into a hole in a wall in Kalkaji. Anyone could use the computer, but there were no instructions on how it worked, and everything was in English, a language very few of the local children would understand.

Within a few hours of the computer being there, a few children began to learn how to use it and were soon on the Internet. Over the next six months, most of the children in the neighbourhood could use the mouse, open programs, browse the Internet, and even download games, music and videos.

Professor Mitra and his team of researchers noticed two ways in which the groups of children were learning. The first happened when one child learned something on his or her own and then showed the others. The second happened when a child discovered something by accident while using the computer. The others, who were watching, then repeated the action when they used it. And as they repeated what they had learned, they would often learn something new as well, which resulted in the whole group learning more.

What was even more impressive was the way the children shared the information. They had meetings where they shared what they had learned and worked on problems together. And they did this all on their own.

Professor Mitra's experiments eventually gained international recognition. In 2007, he gave a TED talk about his research and his ideas on self-organised learning. Soon, teachers around the world became interested in opening Self-Organized Learning Environments (SOLE) in their schools. So, in 2014, Professor Mitra set up The School in the Cloud, an Internet platform aimed at schools, teachers and parents who wanted to start SOLEs in their communities. These days, you will find areas for self-organised learning in primary schools in Europe, North and South America, Africa, Asia and Australia.

Many people asked what self-organised learning would mean for teachers. In fact, critics of Mitra's computer experiments believed that the Indian children would have benefitted more from having a teacher present. Not only do teachers ensure everyone has a fair chance to use the technology, something that didn't happen during the experiments, they also encourage students to learn more and develop their skills.

There's no doubt that teachers will always be key to a child's education. But what Professor Mitra's experiments show us is that students don't just need to depend on their teachers for their education. They can do so much more on their own.

**11 Read the article and put the events (a–f) in the correct order (1–6).**

- a Some children began using the computer. ☐
- b Teachers all over the world wanted to bring self-organised learning into their schools. ☐
- c The majority of children in the area learned how to use the computer. ☐
- d Professor Mitra started the School in the Cloud. ☐
- e Professor Mitra gave a TED talk. ☐
- f Professor Mitra made a computer available for the use of children in a poor area of New Delhi. ☐

Score \_\_\_/6

**12 Read the text again and choose the best answers (A, B or C).**

- 1 Professor Mitra's research involved ...
  - A giving children a computer to use at home.
  - B putting a computer in the street so that anyone walking past could use it.
  - C giving a few children computer lessons so that they would teach their friends.
- 2 The experiment used a computer which ...
  - A included details on how to use it in English.
  - B was in a language that most local children would understand.
  - C included no information on how to use it and was in no other language except English
- 3 After the professor installed the computer, ...
  - A children quickly worked out how to access the Internet.
  - B children took around six months to be able to use it properly.
  - C only a few children in the area worked out how to use it.

4 Professor Mitra noticed that ...

- A children only learned how to use the computer by using it themselves.
- B much of the learning that took place was shared by the group.
- C the children who used the computer the most learned the most about how to use it.

5 The School in the Cloud is ...

- A a school for children who cannot attend normal schools.
- B an online resource to help people set up their own self-organised learning environment.
- C a community of schools that has spread around the world.

6 According to critics of Professor Mitra's experiments, ...

- A without teachers, children were unable to learn some of the functions of the computer.
- B teachers would have been unable to motivate students to do more.
- C the presence of teachers would have helped more children gain access to the computer.

## Writing

**14 Read the email from your friend Carl who is having problems making friends at his new school. Write a reply in 140–190 words. Include the following:**

- thank him for his email and give news about what you've done or been doing recently
- ask him a question about his new school
- give him some advice about the best way to make new friends at school
- suggest a time and place to meet soon

From: Carl

Subject: New school

Hi,

How are you? How's the new term going?

I'm not having a great time at my new school. It's much bigger than my old school, and I'm finding it really difficult to make friends. Everyone else seems to know each other already and during break, they just hang around in their own groups. I don't really know what to do.

I hope to hear from you soon.

Best wishes,

Carl

Score \_\_/10

## Speaking

**15 Work in pairs. Ask and answer the questions. When you answer, remember to give reasons and personal details.**

**Student A:** ask these questions.

- 1 Do you prefer to spend your free time inside or outside?
- 2 Would you rather do exams or have continuous assessment?
- 3 Would you prefer to study in your own town or city or in a different town or city?

**Student B:** ask these questions.

- 1 Which places in your town do you prefer to spend your free time in?
- 2 Would you prefer to live in student accommodation or at home?
- 3 Would you rather go to university when you leave school or find a job?
