

Amazing Animals on Our Planet

Animals live in many different parts of the world. Some live on land, others in the sea, and some even in very cold or very hot places.

The lion is called the king of the jungle. It lives in Africa and hunts other animals for food. The panda, on the other hand, is peaceful and eats bamboo in the mountains of China. The gorilla lives in the rainforest and is very intelligent — it can even use tools to find food!

In the ocean, we can find many interesting creatures. The dolphin is friendly and can swim very fast. The whale is the biggest animal in the world, and the shark is a strong and dangerous hunter. The octopus and the squid can change color to hide from other animals. The lobster, oyster, and ray also live in the sea, each with their own special skills.

In very cold places, like the Arctic, the polar bear and the seal need thick fur and fat to keep warm. But in the hot desert, the camel can survive without water for many days. In the rainforest, colorful parrots fly high above the trees, while koalas sleep for hours in eucalyptus trees in Australia.

All these animals are different, but they all need a safe place to live. It is important to protect them and take care of our planet.

- Where does the lion live?

In the desert

In Africa

In the ocean

- What does the panda eat?

Fish

Bamboo

Leaves from eucalyptus trees

- Why is the gorilla intelligent?

It can fly

It can change color

It can use tools to find food

- Which animals can change color?

Octopus and squid

Dolphin and whale

Lion and panda

- What helps the polar bear and seal stay warm?

Thick fur and fat

Feather

Their color

- How long can a camel live without water?

A few hours

Many days

Only one day

- What is the main message of the text?

Animals are dangerous

Animals live everywhere and we should protect them

Only sea animals are important
