45 Marsupial Animals

Marsupials are mammals whose babies are born in a much undeveloped state. Some marsupials have a pouch on their bodies, in which they keep their babies till they are well developed.

Name the following marsupials. You can use the Help Line.

1 

It is one of the few mammals that has fingerprints.

2 

This animal's baby is called a joey.

3 

It has a pointed nose.

4 

It is a small gliding marsupial capable of gliding up to 50 meters.

5 

It has a grasping tail which is hairless at the tip.

6 

When attacked, it pretends to be dead, remains still, does not blink, and hangs its tongue out.

7 

It is extinct on the mainland but still widespread in Tasmania, Australia.

8 

It has a backward-facing pouch so that dirt doesn't enter that.
