

## Activity 5

Microcontroller boards have many components.

Match the components with the correct description.

| Component   |
|-------------|
| Power pad   |
| NeoPixel    |
| LED grid    |
| Push button |
| Pin pad     |

| Description                                                                         |
|-------------------------------------------------------------------------------------|
| Used for input or output Can be connected to other electronic components (modules). |
| Outputs light using RGB colours.                                                    |
| Used to power electronic modules.                                                   |
| Outputs using LED lights.                                                           |
| Used for user input.                                                                |
