	. The temperature at which a solid c	rianges into a liquid is called
	a. the boiling point.	c. absolute zero.
	<ul> <li>the freezing point.</li> </ul>	d. the melting point.
22. The total energy of all the particles in a substance is called		
	a. mass.	c. temperature.
	b. thermal energy.	d. degrees.
23	. One common application of therma	al expansion is
	a. a thermometer.	c. a toaster oven.
	<ul> <li>b. a microwave oven.</li> </ul>	d. a refrigerator.
24. The amount of energy required to raise the temperature of 1 kilogram of a substance by 1 degree Celsius or Kelvin is called its		
		c. specific heat.
		d. heat transfer.

Drag and Drop to put the steps of producing electricity in order:		
		High analysis stars in conditions at
25.		High pressure steam is used to create mechanical energy by being used to
		spin a trubine.
		spiri a trubine.
26.		
201		Electricity is sent to customers.
27.		Thermal energy is added to water to
27.		Thermal energy is added to water to prduce high pressure steam
		produce high pressure steam
		The spinning generator makes
28.		electricity
		cicotriotty
20		A souce of heat, like geothermal energy,
29 .		nucler energy of the buring of a fossil
		fuel releases thermal energy
30.		The mechanical energy of the spinning
		turbine is transfered to a generaor.
