

7 Programming Software

Chapter 7 Programming Software

Programming software allows programmers to develop new **programs**. The most basic programming software is a **source code editor**. These programs are usually basic **text editors**. Programmers use them to enter lines of code into a computer. Lines of code are written in a **programming language**. Programmers use this to write series of commands. When executed *together*, these commands form a complete program.

Other **programming software** are more complex. An **IDE** (integrated development environment) provides tools for writing programs. These usually include a text editor and a **debugger**. Other tools may include a **linker**, a **compiler**, or an **interpreter**.

Get ready!

- 1 Before you read the passage, talk about these questions.
 - 1 How do programmers create new programs?
 - 2 What kinds of software helps programmers write new programs?

Reading

- 2 Read the textbook chapter. Then, mark the following statements as true (T) or false (F).
 - 1 Programmers use text editors to interpret commands.
 - 2 Text editors are a type of source code editor.
 - 3 An IDE is the most basic type of programming software.

Vocabulary

- 3 Match the words (1-6) with the definitions (A-F).

- 1 source code editor
- 2 program
- 3 programming language
- 4 programming software
- 5 interpreter
- 6 compiler

- A any software that supports the development of new applications
- B a series of operations that control the functions of a computer
- C codes used to write commands to a computer
- D an application that decodes instructions written in other languages
- E something that reads and executes other programs
- F software used to enter lines of coded text

3 Read the sentence pairs. Choose which word or phrase best fits each blank.

1 text editor / IDE

- A A(n) _____ usually provides programmers with various tools for writing programs.
- B A(n) _____ is a basic program for entering commands and code into a computer.

2 debugger / linker

- A A _____ provides links to additional information needed for programs to run.
- B A _____ finds and corrects errors in code.

5 Listen and read the textbook chapter again. What tools does an IDE provide?

Listening

6 Listen to a conversation between two students. Choose the correct answers.

- 1 What is the conversation mostly about?
 - A how to interpret instructions in programming code
 - B the difference between two types of computer programs
 - C techniques for entering code into a text editor
 - D the importance of learning different programming languages
- 2 According to the woman, what is sometimes needed to run programs correctly?
 - A using a linker and a compiler together
 - B allowing programs to connect to the internet
 - C writing new instructions in a programming language
 - D translating lines of code into a different programming language

7 Listen again and complete the conversation.

Student 1: Can you help me with something?
 Student 2: Sure. What is it?
 Student 1: I'm confused 1 _____ between linkers and compilers.
 Student 2: Okay. Well, 2 _____ a program to information it needs from other programs.
 Student 1: Wait, I thought an 3 _____ did that.
 Student 2: No. An interpreter just 4 _____ so the program can run.
 Student 1: Okay. So then a compiler is 5 _____ program instructions.
 Student 2: Exactly. It translates information from different 6 _____
 Student 1: I get it now. Thanks.

Speaking

8 With a partner, act out the roles below based on Task 7. Then, switch roles.

USE LANGUAGE SUCH AS:

Can you help me with ...
 I'm having some trouble ...
 I was under the impression ...

Student A: You are a student. Talk to Student B about:

- terms you are confused about
- what you thought the terms meant
- what the terms actually mean

Student B: You are a student. Talk to Student A about terms that he or she is confused about.

Writing

9 Use the conversation from Task 8 to complete the workbook exercise.

Explain the difference between each set of terms:

- 1 Debugger / _____ :
 A debugger is used for finding and correcting errors in code.
 A(n) _____ is used for _____.
- 2 _____ / text editor:
 A(n) _____ is used for _____.
 A text editor is used to enter lines of code and create programs.
