SECTION 3 READING COMPREHENSION

Time—55 minutes
(including the reading of the directions)
Now set your clock for 55 minutes.

This section is designed to measure your ability to read and understand short passages similar in topic and style to those that students are likely to encounter in North American universities and colleges.

Directions: In this section you will read several passages. Each one is followed by a number of questions about it. You are to choose the one best answer, (A), (B), (C), or (D), to each question. Then, on your answer sheet, find the number of the question and fill in the space that corresponds to the letter of the answer you have chosen.

Answer all questions about the information in a passage on the basis of what is stated or implied in that passage.

Read the following passage:

Questions 1–10

Line
(5)

A solar eclipse occurs when the Moon moves in front of the Sun and hides at least some part of the Sun from the earth. In a partial eclipse, the Moon covers part of the Sun; in an annular eclipse, the Moon covers the center of the Sun, leaving a bright ring of light around the Moon; in a total eclipse, the Sun is completely covered by the Moon.

It seems rather improbable that a celestial body the size of the Moon could completely block out the tremendously immense Sun, as happens during a total eclipse, but this is exactly what happens. Although the Moon is considerably smaller in size than the Sun, the Moon is able to cover the Sun because of their relative distances from Earth. A total eclipse can last up to 7 minutes, during which time the Moon's shadow moves across Earth at a rate of about .6 kilometers per second.

1. This passage mainly
 - describes how long an eclipse will last
 - gives facts about the Moon
 - explains how the Sun is able to obscure the Moon
 - informs the reader about solar eclipses
2. In which type of eclipse is the Sun obscured in its entirety?

 - Cover
 - Evaporate
 - Shrink
6. According to the passage, how can the Moon hide the Sun during a total eclipse?
 - The fact that the Moon is closer to Earth than the Sun makes up for the Moon's smaller size.
 - The Moon can only obscure the Sun because of the Moon's great distance from the earth.
 - Because the Sun is relatively close to Earth, the Sun can be eclipsed by the Moon.
 - The Moon hides the Sun because of the Moon's considerable size.

Questions 11–20

While the bald eagle is one national symbol of the United States, it is not the only one. Uncle Sam, a bearded gentleman costumed in the red, white, and blue stars and stripes of the nation's flag, is another well-known national symbol. According to legend, this character is based on Samuel Wilson, the owner of a meat-packing business in Troy, New York. During the War of 1812, Sam Wilson's company was granted a government contract to supply meat to the nation's soldiers; this meat was supplied to the army in barrels stamped with the initials U.S., which stood for United States. However, the country was at that time relatively young, and the initials U.S. were not commonly used. Many people questioned what the initials represented, and the standard reply became "Uncle Sam," for the owner of the barrels. Questions 21–31

Line (5) Most people think of deserts as dry, flat areas with little vegetation and little or no rainfall, but this is hardly true. Many deserts have varied geographical formations ranging from soft, rolling hills to stark, jagged cliffs, and most deserts have a permanent source of water. Although deserts do not receive a high amount of rainfall—to be classified as a desert, an area must get less than twenty-five centimeters of rainfall per year—there are many plants that thrive on only small amounts of water, and deserts are often full of such plant life.

(10) Desert plants have a variety of mechanisms for obtaining the water needed for survival. Some plants, such as cactus, are able to store large amounts of water in their leaves or stems; after a rainfall these plants absorb a large supply of water to last until the next rainfall. Questions 32–41

American jazz is a conglomeration of sounds borrowed from such varied sources as American and African folk music, European classical music, and Christian gospel songs. One of the recognizable characteristics of jazz is its use of improvisation: certain parts of the music are written out and played the same way by various performers, and other improvised parts are created spontaneously during a performance and vary widely from performer to performer.

The earliest form of jazz was ragtime, lively songs or *rags* performed on the piano, and the best-known of the ragtime performers and composers was Scott Joplin. Born in 1868 to former slaves, Scott Joplin earned his living from a very early age playing the piano in bars along the Mississippi. One of his regular jobs was in the Maple Leaf Club in Sedalia, Missouri. It was there that he began writing the more than 500 compositions that he was to produce, the most famous of which was "The Maple Leaf Rag."

Questions 42–50

The idea of determinism, that no event occurs in nature without natural causes, has been postulated as a natural law yet is under attack on both scientific and philosophical grounds. Scientific laws assume that a specific set of conditions will unerringly lead to a predetermined outcome.

Line (5) However, studies in the field of physics have demonstrated that the location and speed of minuscule particles such as electrons are the result of random behaviors rather than predictable results determined by pre-existing conditions. As a result of these studies, the principle of indeterminacy was formulated in 1925 by Werner Heisenberg. According to this principle, only the probable behavior of an electron can be predicted. The inability to absolutely predict the behavior of electrons casts doubt on the universal applicability of a natural law of determinism. Philosophically, the principal (10) opposition to determinism emanates from those who see humans as creatures in possession of free will. Human decisions may be influenced by previous events, but the ultimate freedom of humanity may possibly lead to unforeseen choices, those not preordained by preceding events.

42. It is implied in the passage that a natural law

- (A) is something that applies to science only

- (A) It was formulated based on studies in physics.
- (B) It is philosophically unacceptable.
- (C) It has been in existence for more than a decade.
- (D) It is concerned with the random behavior of electrons.
