5. Drag the device to match its description.

This is the main tool used to send information to the computer. We use it to enter data or give commands.

It is a device used to point, move, and select things on the computer screen. When we move the mouse over a flat surface, the pointer on the screen moves in the same way.

It is like a small touch-sensitive area on some laptops. It controls the mouse pointer on the screen. It has buttons like the left and right buttons on a mouse.

This device allows us to record sounds and convert them into a digital format for the computer.

These are special input devices designed for specific needs and disabilities. They range from hands-free alternatives to devices called digitizers.

It looks like a pen and is used instead of our finger to select or activate things on a touch screen.

This is a display device that allows us to interact with the computer by touching the screen.

This is a special device used to play video games or control entertainment systems.

It uses a beam of light to scan codes, text, or images directly into a computer. You may see barcode or QR scanners at store checkout counters.

Mouse | Touch screen | Stylus | Touchpad | Game controller

Microphone | Keyboard | Adaptive input devices | Optical scanner
