In today's global society, education plays a vital role in helping people adapt to rapid changes. Students are expected not only to gain knowledge but also to develop skills that allow them to achieve success in the future. Modern education focuses on encouraging learners to think independently, participate actively, and interact with others in meaningful ways.

Technology has had a significant impact on education. Online learning is now widely available, providing opportunities for students from different communities to access information easily. This flexible learning style allows students to manage their time more efficiently. However, technology also affects how students consume information. Some learners may rely too much on digital devices, which can reduce real interaction in the classroom. As a result, teachers must carefully consider how technology should be used to support learning rather than replace human communication.

Education also helps students become more confident and disciplined. Through regular practice and frequent evaluation, learners can identify their strengths and weaknesses. Teachers often emphasize the importance of discipline and responsibility because every action has a consequence. For example, students who fail to maintain good study habits may experience a decline in academic performance. On the other hand, those who are motivated and willing to improve usually benefit greatly from their efforts.

Another important factor in education is the environment. A supportive learning environment can inspire students and encourage them to contribute positively to society. Schools often cooperate with local communities to create activities that allow students to volunteer and gain valuable experience. These activities help students become more aware of social problems and understand the importance of culture and cooperation. When students are encouraged to participate, they learn to distinguish between personal opinions and factual evidence.

Change in education is inevitable in the modern world. New teaching methods are constantly developed to meet the demands of society. While some people may feel anxious about these changes, others see them as opportunities for growth. It is important to evaluate new ideas carefully and rely on reliable sources of information before making decisions. By doing so, students can expand their perspectives and prepare themselves for future challenges.

In conclusion, education is more than just learning in classrooms. It is a process that helps individuals grow, adapt, and become responsible members of society. With sufficient support from teachers, parents, and communities, students can develop the ability to face change confidently and make a positive impact on the world.

1. What is the main purpose of the passage?
A. To compare online and traditional education
B. To explain how education helps people adapt to change
C. To criticize the use of technology in schools
D. To describe problems in modern society
____

2. According to the passage, modern education mainly encourages students to _____.
A. memorize information
B. study alone
C. think independently and participate actively
D. focus only on exams
____

3. What does the word "impact" (paragraph 2) most nearly mean?
A. rule
B. influence
C. method
D. condition
____

4. Why must teachers carefully consider the use of technology?
A. It is too expensive for schools
B. It may reduce classroom interaction
C. Students dislike online learning
D. Technology is unreliable
____

5. What happens when students fail to maintain good study habits?
A. They become more confident
B. Their performance may decline
C. They gain more opportunities
D. Their skills develop faster
____

6. Which of the following best describes a supportive learning environment?
A. One that focuses only on exams
B. One that limits student participation
C. One that inspires and encourages contribution
D. One that avoids cooperation with communities
____

7. The word "inevitable" (paragraph 5) is closest in meaning to _____.
A. avoidable
B. uncertain
C. necessary
D. unavoidable
____

8. Why are students encouraged to join community activities?
A. To replace classroom learning
B. To compete with other schools
C. To gain experience and social awareness
D. To reduce academic responsibility
____

9. What can be inferred about students who feel anxious about change?
A. They refuse to learn new skills
B. They may see change as a challenge
C. They always perform poorly
D. They avoid technology completely
____

10. Which statement best summarizes the conclusion of the passage?
A. Education is only useful in schools
B. Technology is the most important factor
C. Education helps people grow and face future challenges
D. Communities play no role in education
