

- **1. What is water called when it is found below the Earth's surface in the spaces of soil and rock?**
 - A) Surface water
 - B) Groundwater
 - C) Rainwater
 - D) Saltwater
- **2. What is the main difference between surface water and underground water?**
 - A) Surface water is deeper than underground water.
 - B) Surface water is on top (like rivers); underground water is hidden below.
 - C) Surface water is always cold; underground water is always hot.
 - D) There is no difference.
- **3. The top level of underground water is known as the:**
 - A) Water slide
 - B) Water desk
 - C) Water table
 - D) Water chair
- **4. Which type of well is typically a wide, open hole dug by hand or tools?**
 - A) Tube well
 - B) Dug well (Open well)
 - C) Canal
 - D) River
- **5. How is a tube well different from a regular dug well?**
 - A) It is much wider.
 - B) It is deeper and uses a narrow pipe.

- o C) It only collects rainwater.
 - o D) It is made of wood.
- **6. We usually need to dig tube wells when:**
 - o A) The water table is very close to the surface.
 - o B) The water is very deep underground.
 - o C) We want to swim in them.
 - o D) It is raining heavily.
- **7. What do people use to take water out of a very deep tube well?**
 - o A) A bucket and rope
 - o B) An electric or hand pump
 - o C) A fishing net
 - o D) A ladder
- **8. How are most modern tube wells made?**
 - o A) By using a small shovel.
 - o B) By using a big drilling machine to bore a deep hole.
 - o C) By waiting for a hole to form naturally.
 - o D) By pouring water into the ground.
