

Read the text and choose the best option (A, B, or C) to complete the sentences.

Hello, class. Today I'd like to tell you about two energy sources. They are non-renewable sources and renewable sources.

Non-renewable sources are coal, oil and natural gas. We can use these sources to produce energy. They are cheap and easy to use. People use them a lot. But they are very limited and will run out soon.

Renewable sources come from the sun, wind or water. When energy comes from the sun, we call it solar energy. Wind energy comes from the wind, and hydro energy comes from water.

Renewable sources are available, clean and safe to use. But they are expensive to produce.

In the future, we will rely more on renewable energy sources. They are better for the environment, and they will not run out.

1. What are the advantages of non-renewable sources?

- A. available and cheap B. cheap and easy to use C. expensive and available

2. What type of energy sources come from the sun, wind or water?

- A. Renewable sources B. All energy sources C. Non-renewable sources

3. What do we call energy that comes from water?

- A. wind energy B. solar energy C. hydro energy

4. What are renewable energy sources better for?

- A. the environment B. our cars C. hydro energy

5. How many energy sources are there?

- A. One B. Two C. Three

6. What do non-renewable sources include?

- A. Sun, wind and water B. Coal, oil and natural gas C. Solar and wind energy

7. What are the advantages of renewable energy?

- A. They are available, clean and safe to use
B. They are cheap and easy to use
C. They will run out soon

8. What will we rely more on in the future?

- A. Non-renewable energy sources
B. Coal and oil
C. Renewable energy sources
