

COMPUTING FOR VOLUME

The formula for getting the volume of a rectangular prism is $L \times H \times W$.
Let's practice computing for volume with the following problems:

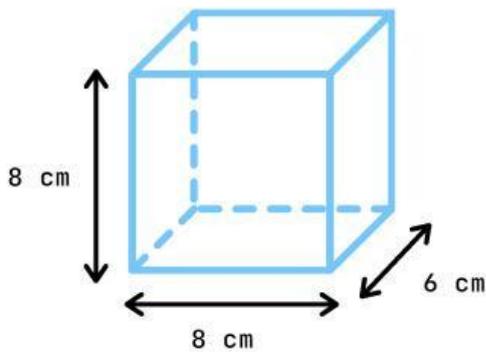

$$\begin{array}{c} L \\ \square \end{array} \times \begin{array}{c} H \\ \square \end{array} \times \begin{array}{c} W \\ \square \end{array}$$

Volume:

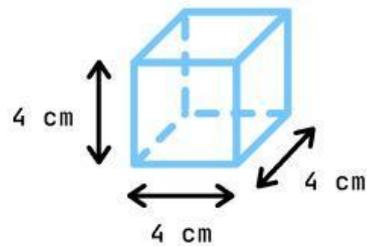

$$\begin{array}{c} L \\ \square \end{array} \times \begin{array}{c} H \\ \square \end{array} \times \begin{array}{c} W \\ \square \end{array}$$

Volume:

$$\begin{array}{c} L \\ \square \end{array} \times \begin{array}{c} H \\ \square \end{array} \times \begin{array}{c} W \\ \square \end{array}$$

Volume:

$$\begin{array}{c} L \\ \square \end{array} \times \begin{array}{c} H \\ \square \end{array} \times \begin{array}{c} W \\ \square \end{array}$$

Volume:
