

The Best Habitat

for Me

An animal's habitat is the place where it lives. I'm a red panda, and my habitat is a cool, dark forest. In my opinion, it is the finest habitat in the world! The forest ecosystem has everything I need, so it is the best place for me to live.

A good habitat, like mine, should provide shelter. The forest has lots of trees. That is where I spend most of my time. The trees provide a place for me to sleep, especially during the hottest part of the day. Trees also keep me safe. The color of my fur helps me blend in with the trees so other animals can't see me as well. I can climb tall trees to escape if I am being chased.

A good habitat should also provide food. Mostly, I eat bamboo. Many different species of bamboo grow in my habitat. I like to eat the shoots and leaves. Some of my other favorite foods are fruit, roots, and acorns. The insects I find on the ground are tasty, too.

This is me.

Here I am taking a nap.

Bamboo leaves are yummy!

All animals need food and shelter. Some animals find these things in other habitats, like deserts or prairies. I have everything I need right here in the forest. Nothing is nicer than waking up in my favorite tree and knowing a tasty meal is close by. My forest home is the perfect home for me!

Home Sweet Home

It can be hard to see me in the trees.

Explain the meaning of ecosystem, habitat, and species using examples from the text.

A species is a group of animals or plants that are the same kind.
