

Marine Animals Are Living and Moving

In the ocean, many amazing animals are living together in a big and beautiful underwater world.

A dolphin is swimming quickly through the clear blue water while it is playing with other dolphins.

It is jumping out of the water and making big splashes as it moves.

A large whale is moving slowly in the deep sea while it is making sounds to communicate with others.

A group of fish is swimming in circles and staying close together to protect themselves from danger.

They are moving in the same direction and changing direction at the same time.

A sea turtle is swimming near the colorful coral reef while it is eating small plants and algae.

It is moving its fins slowly and calmly through the water.

A crab is walking along the sandy ocean floor while it is looking carefully for food.

It is moving sideways and hiding quickly when it feels danger.

An octopus is hiding under a rock while it is changing its color to stay safe from predators.

It is using its arms to move and explore its surroundings.

A shark is swimming fast in the water while it is hunting for fish.

It is moving silently and watching everything around it.

Some jellyfish are floating gently in the water while they are moving with the ocean currents.

They are shining softly when the sunlight touches them.

A seahorse is holding onto a plant while it is moving very slowly with the water.

It is not swimming fast because it is very small and delicate.

A starfish is resting on the seabed while it is staying still most of the time.

It is living quietly on the ocean floor with other small animals.

Questions

1. The dolphin is swimming quickly through the water. T F
2. The whale is running on land. T F
3. What is the dolphin doing?
 - a) Jumping and making splashes
 - b) Sleeping
 - c) Climbing rocks
4. The fish are staying together to be safe. T F
5. What are the fish doing?
 - a) Flying

- b) Swimming in circles together
 - c) Sleeping
6. The sea turtle is eating plants and algae. T F
7. What is the crab doing?
- a) Flying
 - b) Walking and looking for food
 - c) Jumping high
8. The octopus is changing its color. T F
9. What is the shark doing?
- a) Playing
 - b) Hunting for fish
 - c) Sleeping
10. Jellyfish are floating with the ocean currents. T F
11. What are jellyfish doing?
- a) Running
 - b) Floating and shining
 - c) Climbing
12. The seahorse is swimming very fast. T F
13. What is the seahorse doing?
- a) Holding onto a plant and moving slowly
 - b) Hunting
 - c) Jumping
14. The starfish is resting on the seabed. T F
15. What is the whale doing?
- a) Making sounds and moving slowly
 - b) Running
 - c) Climbing
