In an increasingly global world, a substantial number of young individuals are opting to pursue their education overseas. This phenomenon presents a duality of both merits and demerits.

Studying abroad benefits young people in several ways. First, it furnishes them with an invaluable avenue for honing their proficiencies and attaining linguistic fluency in an alternative tongue. It is also a valuable opportunity to learn how to work with people from different cultures and backgrounds. In addition, studying abroad can open doors to interesting jobs once young people are back in their home country.

However, studying abroad also has some downsides. Young people living far from home can feel isolated and miss their families and friends. In addition to feelings of isolation, they may have difficulty acclimating to the new culture and surroundings. Given the pronounced divergence in societal norms across various nations, this can pose an accentuated impediment for a student embarking on an overseas educational journey. As a result, they need to adjust not only to different ways of doing things but also to divergent expectations and goals.

While studying abroad is undeniably replete with formidable challenges, a pliant and receptive mindset can nonetheless bestow upon a young person a profound outlook on life, coupled with an enriching tapestry of lived experiences.

Read the following passage and mark the letter A, B, C or D on your answer sheet to indicate the option that best fits each of the numbered blanks from 26 to 30.

The original purpose of many cultural celebrations, which was to strengthen communal bonds and mark significant life events, now often competes with intense commercial pressures. Such pressure manifests in various forms; it involves the transformation of sacred rituals into retail opportunities, the expectation of extravagant gift-giving, a practice that is heavily promoted by advertisers, or (26) \_\_\_\_ all of which can obscure the original meaning of the event.

Consumers often find themselves caught in a cycle, believing they are upholding cherished traditions, a feeling that provides immense psychological comfort, (27) \_\_\_\_\_. The phenomenon is not accidental; it is a deliberate strategy designed to link emotional fulfillment directly to consumption, a tactic that proves remarkably effective year after year.

The pressure to participate in this cycle of consumption is often internalized as a social obligation. (28) \_\_\_\_\_. The holiday season, as a direct consequence, frequently becomes a source of significant financial stress and personal anxiety, a reality that stands in stark contrast to its purported goal of bringing joy and rest.

A counter-movement focused on minimalism and authentic connection is, consequently, gaining momentum. (29) \_\_\_\_\_. Reclaiming these traditions is a difficult process, one that requires a conscious effort to separate genuine meaning from commercial artifice. The success of such an endeavor is contingent in part (30) \_\_\_\_\_ that prioritizes personal connection over material wealth, and in part upon a collective will to create new, more meaningful rituals.

**D.** on a significant reassessment of what is personally held valuable

Read the following passage and mark the letter A, B, C, or D on your answer sheet to indicate the option that best fits each of the numbered blanks from 31 to 40.

Workaholism is a growing concern in modern society, affecting individuals across various professions and backgrounds. Unlike engaged workers who derive intrinsic pleasure from their careers, workaholics experience an uncontrollable compulsion to work, culminating in deleterious outcomes in both their professional and personal lives. [I] This phenomenon is characterized by persistent thoughts about work, emotional distress when not working, and exceeding reasonable expectations in terms of workload. Studies suggest that personality traits such as perfectionism, extroversion, and Type A tendencies increase the likelihood of developing work addiction, making certain individuals more susceptible than others.

[II] The effects of workaholism extend beyond long hours and missed personal time, as it has been linked to significant declines in productivity and job performance. Research has shown that employees who push themselves excessively do not necessarily outperform their colleagues, and in some cases, their efficiency suffers due to fatigue and stress. Errors are more frequent among workaholics, particularly in high-risk professions such as healthcare, where exhaustion can lead to serious mistakes that endanger lives. Additionally, studies indicate that people with work addiction report lower job satisfaction, despite dedicating excessive time and effort to their careers, leading to frustration and feelings of burnout.

Beyond the workplace, the repercussions of workaholism impact overall well-being, as individuals struggling with this issue often experience deteriorating physical and mental health. Many workaholics forgo sleep, exercise, and proper nutrition, leading to increased rates of burnout, anxiety, and cardiovascular problems. Social relationships also suffer, as excessive dedication to work leaves little room for meaningful interactions with family and friends, causing isolation and emotional distress. While putting one's best foot forward is often seen as a virtue in professional settings, workaholics take it to an extreme, sacrificing their well-being in the pursuit of unattainable goals, which ultimately affects both personal happiness and professional success. [III]

Addressing workaholism remains a challenge, as no scientifically proven interventions exist to effectively curb the problem, rendering prevention paramount. [IV] Employers can also implement policies that encourage healthier work habits, including limiting after-hours access to work-related materials, discouraging excessive overtime, and promoting autonomy among employees. While these steps may ameliorate the adverse symptoms of workaholism, substantive, enduring transformation fundamentally hinges upon individuals recognizing their unhealthy patterns and taking proactive steps to restore balance in their lives before their physical and mental health deteriorates further.

Question 31 [1090795]: Where in the passage does the following sentence best fit?

"However, mindfulness and planned breaks help reduce stress and improve worklife balance by encouraging detachment from work."

- A. [I]
- B. [II]
- C. [III]
- D. [IV]

Question 32 [1090796]: The phrase putting one's best foot forward in paragraph 3 could be best replaced by \_\_\_\_\_.

- A. making a strong effort to succeed
- B. setting aside personal or external responsibilities
- C. rushing into tasks without preparation
- D. deliberately exposing oneself to superfluous danger

Question 33 [1090797]: According to paragraph 1, which of the following is NOT mentioned as a characteristic of workaholism?

- A. Exceeding what is considered a reasonable workload
- B. Struggling with maintaining social relationships due to work habits
- C. Experiencing distress when not engaged in work-related activities
- D. Feeling an irrepressible desire to continue working

Question 34 [1090798]: Which of the following best summarises paragraph 2?

- A. Workaholics push themselves too hard, which slightly improves their overall efficiency but makes them more prone to exhaustion and occasional mistakes.
- B. There is a propensity for excessively hardworking employees to invariably eclipse the performance of their associates, notwithstanding their experience of psychological strain and a noted reduction in occupational fulfillment.
- C. Workaholism detrimentally impacts productivity, job satisfaction, and mental health, culminating in strain, fatigue, and a higher incidence of errors in high-risk professions.
- D. Long working hours lead to significantly increased job performance, but fatigue and burnout will not cause minor challenges in certain demanding professional fields.

Question 35 [1090799]: According to paragraph 3, excessive dedication to work affects social relationships by \_\_\_\_\_.

- A. boosting chances for networking and collaboration
- B. lessening the hours dedicated to quality time with loved ones
- C. easing mental discomfort and the sense of being cut off from friends
- D. inspiring workers to seek a better equilibrium between their professional and personal lives

Question 36 [1090800]: Which of the following best paraphrases the underlined sentence in paragraph 4?

- A. The absence of scientifically proven strategies to reduce workaholism makes tackling this issue relatively easy, highlighting prevention as the most essential and effective response.
- B. Workaholism remains difficult to address, but with scientifically established methods, prevention is optional rather than essential.
- C. Combating workaholism continues to be a tall order, since no interventions are scientifically validated to effectively control the issue, making prevention pivotal.
- D. Given the lack of empirically supported interventions to manage workaholism, efforts to address the issue must focus primarily on treatment as the most reliable strategy.

Question 37 [1090801]: According to the studies, what increases an individual's susceptibility to work addiction?

- A. External influences such as professional rivalry and prolonged working schedules
- B. Social norms that disapprove of spending too much time at work
- C. Low drive and limited passion for professional advancement
- D. Personality traits like perfectionism, extroversion, and Type A behaviors

Question 38 [1090802]: Which of the following can be inferred from the passage?

- A.** Workaholics' excessive efforts to excel at work can harm their health and relationships, indicating that overworking does not necessarily lead to greater success or happiness.
- B.** Advocating for staff to exceed customary working durations constitutes the paramount method for augmenting both output and vocational contentment.
- C.** The principal leverage concerning workaholism resides with employers, given that corporate mandates are the predominant determinant of employees' day-to-day occupational customs and schedules.
- D.** By setting up rules that restrict access to work materials outside of office hours, employers ensure an automatic reduction in employee stress.

Question 39 [1090803]: The word their in paragraph 1 refers to \_\_\_\_.

- A.** engaged workers
- B.** workaholics
- C.** outcomes
- D.** jobs

Question 40 [1090804]: Which of the following best summarizes the passage?

- A.** Workaholism harms productivity, mental health, and relationships, while solutions depend on employers promoting work-life balance and individuals recognizing unhealthy patterns before their well-being deteriorates.
- B.** People with work addiction often neglect personal health and relationships, while employers should encourage productivity and promote policies that help workers avoid unhealthy work patterns before they come in for long-term consequences.
- C.** Workaholics, who are simply engaged workers with Type A personalities, suffer mainly from missed personal time, a problem that can be fixed by employers discouraging overtime and by individuals increasing their sleep hours.
- D.** In modern professional life, dedicating all of one's time and energy to work is necessary for achieving goals, and personal sacrifices, such as reduced sleep and social isolation, are universally expected phenomena and are deemed inevitable.
