

The Life of Marie Curie

Marie Curie was a famous scientist. She was born in 1867 in Poland. When she was young, she loved learning and studying science.

Later, she moved to France to study at a university. Life was not easy for her. She did not have much money, so she had to work and study at the same time.

However, she never gave up.

Marie Curie worked with her husband, Pierre Curie. Together, they discovered two new elements: radium and polonium. Their work helped people understand radioactivity.

In 1903, Marie Curie won the Nobel Prize in Physics. She was the first woman to win this prize. Later, in 1911, she won another Nobel Prize in Chemistry. She is the only person to win Nobel Prizes in two different sciences.

Marie Curie's work was very important for medicine. Today, her discoveries help doctors treat serious diseases. She is remembered as one of the greatest scientists in history.

Part 1: Multiple Choice

Choose the correct answer (A, B, C, or D).

1. Where was Marie Curie born?

A. France

B. Poland

C. England

D. Germany

2. Why was her life difficult in France?
 - A. She was sick
 - B. She had no friends
 - C. She did not have much money
 - D. She did not like studying
3. Who did she work with?
 - A. Her teacher
 - B. Her brother
 - C. Her husband
 - D. Her friend
4. What did she discover?
 - A. New planets
 - B. New animals
 - C. New elements
 - D. New countries
5. What is special about Marie Curie?
 - A. She was the youngest scientist
 - B. She won two Nobel Prizes in different sciences
 - C. She never studied
 - D. She worked alone

Part 2: Short Answer

Answer in 1–2 sentences.

1. When was Marie Curie born?
→ _____
2. Where did she study later?
→ _____
3. What are the names of the two elements she discovered?
→ _____
4. Why is her work important today?
→ _____
