

Scenario Card 1 - The Science Observation

A Grade 3 teacher places a bowl of ice in the classroom. Students observe it for 10 minutes and note what changes happen. They describe water droplets forming around the bowl.

Question: Which Pramana is primarily being used?

Select your answer:

Scenario Card 2 - The Stomach Ache Mystery

A child complains of stomach pain. The teacher recalls that the child ate junk food during lunch and skipped breakfast. Based on these clues, the class discusses possible reasons for the discomfort.

Question: Identify the Pramana involved and justify your reasoning.

Select your answer:

Scenario Card 3 - The Fraction Pizza

To explain fractions, a teacher compares a whole pizza to parts like $\frac{1}{2}$ and $\frac{1}{4}$. Students relate slices to fraction symbols.

Question: Which Pramana is reflected here?

Select your answer:

Scenario Card 4 - The Missing Homework

A student says they completed their homework, but it is not in their bag. The teacher reasons that it might have been left at home, even though it is not seen in class.

Question: Which Pramana involves knowledge gained from absence or non-perception?

Select your answer:

Scenario Card 5 - The Silent Classroom

The teacher enters a classroom and notices all students are unusually silent and looking at one corner. Without seeing what happened, the teacher assumes something unexpected occurred.

Question: Which Pramana involves forming a hypothesis based on circumstances?

Select your answer:

Scenario Card 6 - The Expert's Advice

During a health lesson, the teacher shares information from a pediatrician about the importance of vaccinations.

Question: Which Pramana involves knowledge gained from reliable testimony?

Select your answer:
