

My day as a nurse

(add sequencers to help the day flow)

Initially, I began my shift by reviewing each patient's care plan, and **meanwhile** the night nurse handed over details about an acute admission. **Secondly**, I prepared the medication trolley and **simultaneously** checked that all capsules and equipment were stocked correctly. **After that**, I assisted a patient who needed help adjusting their position for comfort. **Finally**, I completed my evaluations and documented all interventions, and **ultimately** ensured every patient in the unit was safe and settled. **In summary**, these sequencing words help show the clear order of nursing tasks throughout a shift.
