

Fix the MISTAKES

Alex: Hey Sam, how's the new migration project treating you? I heard **1. you guys are building the whole backend by schratch.**

Sam: Hey! Yeah, it's a beast. I mean, **2. it sounds very powerful** when you see it. **3. Last month we have to implement the core API routing,** and we immediately hit a wall with performance.

Alex: Man, I bet. **4. Especially with the sheer amount of request your services pull in** during peak hours. How'd you guys fix it?

Sam: **5. To avoid that we implements a strict rate-limiting policy** right at the gateway level. If we hadn't, the server would just crash, and **6. is a big issue** if we want to launch on time. What about your team?

Alex: We're just trying to automate the boring stuff. Right now, **7. we use it for orchestrate the deployments** so we don't have to push code manually anymore.

Sam: Oh, nice. I really need to learn how that pipeline works. **8. Thank you for explain** how you're handling it.

Alex: Anytime! Let's grab coffee later and I can show you the dashboard.
