**Question 35.** A. little                      B. much                      C. several                      D. great deal

*Read the following passage and choose the letter A, B, C, or D that indicates the correct answer to each of the questions from 36 to 40.*

In high school, students will be using digital tools in almost every lesson – for studying, group discussions, assignments, and even exams. Using technology in school not only prepares them for future careers but also teaches them how to manage their time and stay focused. In some subjects, technology can also assist in building professional connections and preparing for future job opportunities. It's important for students to start learning these skills early to be ready for what's ahead.

A lot of school tasks and homework now involve research online. Let's be honest: kids spend a lot of time on the internet, and it's not just for playing games. With the vast amount of information available online, students can explore new ideas and find useful knowledge that would have once required a trip to the library.

Today, if students don't know something, they simply search for it online. While this isn't necessarily a bad habit, it's important that students focus on understanding what they read, rather than just relying on technology. Allowing students to use their devices in class can improve their learning. When they **conduct** their own research, they are more likely to remember the material than if they just take notes from a lecture.
