

MATEMÁTICAS 5°. OPERACIONES COMBINADAS I

1. Realiza las siguientes operaciones combinadas.

$$9 \times 4 : (12 - 9) - 12$$

Diagram showing the order of operations for the expression $9 \times 4 : (12 - 9) - 12$. Arrows indicate the sequence: first, the multiplication 9×4 and the subtraction inside the parentheses $12 - 9$; then, the division of the result of the multiplication by the result of the subtraction; and finally, the subtraction of 12 from that result. Each step is represented by a box with the corresponding operation symbol.

$$(10 + 11) : 3 \times 2 - 13$$

Diagram showing the order of operations for the expression $(10 + 11) : 3 \times 2 - 13$. Arrows indicate the sequence: first, the addition inside the parentheses $10 + 11$; then, the multiplication of the result by 2; then, the division of that result by 3; and finally, the subtraction of 13 from the final result. Each step is represented by a box with the corresponding operation symbol.

2. Realiza las siguientes operaciones combinadas en tu cuaderno y anota los resultados en su casillero correspondiente.

$27 + 3 \times 5 - 16 = \square$

$27 + 3 - 45 : 5 + 16 = \square$

$12 \times 3 + (8 : 2) = \square$

$(2 \times 4 - 6) \times (6 - 4) = \square$

$8 \times 3 - 30 : 3 = \square$

$(7 - 4) + (4 + 5) = \square$
