

All About Snails

There are thousands of different types of snails around the world. Snails can be found on land, in the sea, or freshwater. Snails have long, slimy, soft bodies. They have hard shells on their backs.

Snails live in many different places. Some can be found in the hot desert, while some prefer cold temperatures. Snails don't just live in one area though. They travel around carrying their homes on their backs.

Snails eat many different things depending on where they live. They like to eat plants, fruit, vegetables, and algae.
