

Quiz: Alterations of Gene Expression

Part I: True or False: Write T or F

1. ____ Gene expression is the process by which information in a gene is used to make a protein.
 2. ____ All genes in a cell are active at the same time.
 3. ____ Environmental factors can influence gene expression.
 4. ____ Gene expression can be turned on or off.
 5. ____ Changes in gene expression always involve changes to the DNA sequence.
 6. ____ Proteins can help regulate gene expression.
 7. ____ Different cell types can have different patterns of gene expression.
 8. ____ Nutrition and stress can affect gene expression.
 9. ____ Gene expression has no effect on an organism's traits.
 10. ____ Alterations in gene expression can sometimes lead to disease.
-

Part II: Matching

Match the term in Column A with the correct definition in Column B.

Column A

11. Gene Expression
12. Protein
13. Regulation
14. Environmental Factors
15. Trait

Column B

- A. Factors outside the organism that can affect genes
 - B. A process that controls whether a gene is active
 - C. A molecule made from genetic instructions
 - D. The process of using genetic information to make a product
 - E. A characteristic of an organism
-

Part III: Multiple Choice: Circle the best answer.

- | | |
|--|---|
| <p>16. What is gene expression?</p> <ol style="list-style-type: none">a. The copying of DNAb. The process of using genetic information to make proteins or other productsc. Cell divisiond. Mutation of DNA | <p>17. Which of the following can influence gene expression?</p> <ol style="list-style-type: none">a. Dietb. Temperaturec. Stressd. All of the above |
|--|---|

18. Why do muscle cells and nerve cells look and function differently?
- a. They contain different DNA
 - b. They express different genes
 - c. They have no genes
 - d. They are different species
19. Which molecule often helps regulate gene expression?
- a. Water
 - b. Protein
 - c. Oxygen
 - d. Sugar
20. Altered gene expression can affect:
- a. Cell function
 - b. Physical traits
 - c. Health
 - d. All of the above
21. What does it mean when a gene is "turned off"?
- a. The gene is removed from DNA
 - b. The gene is not being expressed
 - c. The gene is duplicated
 - d. The gene changes shape
22. Which statement about gene expression is true?
- a. It is the same in every cell.
 - b. It never changes.
 - c. It can respond to environmental conditions.
 - d. It only occurs in plants.
23. Which of the following is an example of an environmental influence on gene expression?
- a. Sunlight exposure
 - b. Nutrition
 - c. Stress
 - d. All of the above
24. Alterations in gene expression may contribute to:
- a. Development and growth
 - b. Adaptation to the environment
 - c. Certain diseases
 - d. All of the above
25. The main purpose of gene regulation is to:
- a. Ensure genes are used when needed
 - b. Destroy DNA
 - c. Stop all protein production
 - d. Create mutations
