4. I like to go to bed early, but my friend *is liking / likes* to stay up late
5. I like to take walks *in / on / at* the evening

IV- **Read. Choose the correct answer**

The Need for Darkness

When was the last time you looked up and saw a sky filled with stars? If you live in a city, it may be a rare event. This is because to see stars, you need darkness.

Light pollution is the overuse of artificial light. It's true—light pollutes the sky. With so many streetlights, neon business signs, and other outdoor lights, most of us never experience complete darkness.

Light pollution has many negative effects on the ecosystem. Plants and animals need periods of darkness and light in order to survive. It's especially hard on nocturnal animals that need darkness to hide. Birds that hunt at night use the moon and stars for direction. Light pollution can cause birds to become confused and lost.

Light pollution is harmful to humans, too. Research has shown that artificial light at night makes it harder to go to sleep. It also increases the risk of disease and depression.

So what can you do about light pollution? Only use outdoor lights when and where you really need them. And make sure lights aren't brighter than they need to be.

A. Light pollution is caused by _____.

- a. artificial lights b. Pollutants c. wildlife

B. Nocturnal animals need _____.

- a. Darkness b. light pollution c. daylight

C. You should only use artificial light _____.

- a. when you go to sleep b. when it's dark outside c. when you need it

V. **Match the word to the definition.**

daylight

healthy

streetlight

_____	1. a light near a road
_____	2. not sick
_____	3. light from the sun
